

ELEMENTS

Katerina Gimor

General Performance Notes

Singer Placement

Elements should be performed in a large semi-circle with singers passing from one aisle through the front to the other aisle. So as to be visible by all singers, the conductor should be positioned at the back of the hall. A mixed standing formation is preferable (to create a surround sound effect).

Movement Specific Notes

Earth (I)

Overtone Singing

Earth incorporates a technique known as *harmonic overtone singing* that allows individuals to produce two pitches simultaneously. The lower pitch is known as the fundamental and the upper pitch, which sounds almost like a soft whistle, is the overtone. When singing normally, you tend to only hear the fundamental (although the overtones are naturally present in the sound). In harmonic overtone singing, you work to bring out these overtones by changing vowel shapes, moving the tongue, shaping the lips, and shaping the mouth.

Now before you begin, please note the following:

- When producing harmonic overtones there should be NO tension involved anywhere in the body. So if you are feeling tense or sore, you are doing something wrong. Stop immediately. Relax. Try again when you feel ready.
- Everyone is different. Some people may get this very quickly while for others it may take some time. Don't be discouraged! Keep practicing and you will get it.
- Listen to live or recorded harmonic overtone singing. This will help give you an idea of the sound to mimic. Here is a link to a good live performance by Miroslav Grosser on YouTube: <http://youtu.be/gHcLCXYfjIQ>
(He also has some helpful overtone singing tutorials on his YouTube channel)

Getting started:

- 1) *Sing normally.* In your mid to medium-low register sing a well-supported “oo”. Notice that your tongue is mostly flat (this is why you only hear the fundamental!)
- 2) *Experiment.* To sing overtones you must move your tongue from its normal flat position, rounding the outer edges of your tongue upward (almost touching your upper premolars). Shifting your tongue forward will give you higher overtones. Next, move your “oo” towards an “errrr” and experiment shaping your tongue to produce overtones.
- 3) *More Experimenting.* As mentioned previously, vowels and lip shapes are also an important aspect in producing overtones. To move from the lowest to highest harmonics pronounce the following sounds in this order: “oo, oh, aw, ah, ay, ee”. Now, keeping in mind what was mentioned in step 2, experiment moving up and down the overtone series by pronouncing this list of vowels in order and then backwards.
- 4) *Practice.* Keep practicing and experimenting. Everyone's mouth, tongue and lips are different and so overtone singing is not the same for everyone. Once you can produce overtones keep practicing and work to bring out your overtones and quiet your fundamental. Have fun!

Air (II)

General Notes:

An explanation of overtone singing as well as instructions can be found in the notes preceding the score.

Ideally, the Overtone Group (3 - 6 singers) will have a mix of voice types.

15"

10"

10"

Ov. Sol. 8 **f** *Improvise overtones over the given drone pitches*

Ov. Gr. *continue overtones until line ends*

S1 Group *two singers**

(p) staggered breathing *only a few singers, on upper note*

S1 **Oo**

S2

A1 **Oo**

A2 *** * (O)**

* The two singers in each group should be positioned in different places in the room from each other and from members of the other solo group (ex. Soprano Group singers should not be positioned next to each other or members of the Alto Group)

** Singers need not be split evenly between E♭ and B♭ (low E♭ may be omitted or, if only a small number of singers can reach the low E♭ that is sufficient). Capable singers may also achieve either note (or an octave lower) through strobass or undertone singing. Optionally, this open fifth may also be doubled (and/or doubled at the octave below) on a sustained instrument that can fade in and dim out following the dynamic shape (ex. bowed piano or harp, cello, double bass, etc.)

General Notes:

Singers should be divided into 7 groups of approximately the same size containing individuals from all parts.
For IPA Pronunciation of the text see the notes preceding the score.

* This clef signals only pitch class and therefore the given pitch can be performed in any octave (for example, singers may want to begin in a lower octave then move up to a higher octave during the final crescendo).

** **|o|** = recitation. Repeat the given text at different time). Elongate/emphasize aspirated sounds ("s", "f", "th", etc.)

*** If followed by IV. Fire, the final cutoff and stomp of air should coincide with beat 1 (opening stomp) of Fire.

General Notes:

Body percussion: Stomps are noted below each part and body percussion (claps/chest/thighs hits) are noted above the staff. An L or R underneath the note indicate which hand should be used for a chest or thigh hit.

Optional percussion: If desired, the stomping part may be doubled by a drum (this would be particularly useful in carpeted halls where stomps would not carry well on their own). If used, percussion should also intensify starting from C (playing all beats rather than just the downbeat, getting louder, etc.) to drive momentum to D.

The musical score consists of five staves. Staves S1 and S2 show vocal parts with melodic lines and lyrics "ah". Staves A1 and A2 show a continuous drum pattern. Staff 3 Callers features a stylized illustration of a head with flames. The score includes performance instructions: "repeat boxed idea until line ends" for S1 and S2, "simile (continue body perc. pattern until D)" for A1 and A2, and "Randomly intersperse calls" for the 3 Callers part. The dynamic "f" is indicated above the 3 Callers staff.
